Responsible use of Large Language Models for Research: Cloud and local LLMs for data analysis

Lodewijk Pet | Clinical Epidemiology | PhD candidate | l.a.pet@lumc.nl
Bram van Dijk | Public Health and Primary Care | Postdoc | b.m.a.van_dijk@lumc.nl

Course website: https://bma-vandijk.github.io/RULLMR/

Programme

1. In the news: benchmarks
2. Tabular data analysis with LLMs (homework task 1)
3. Text data analysis with LLMs (homework task 2)

Note: this is not a session on how you can do fancy stats with AI; it aims to help you reflect on the process of getting to a result that you can follow and trust

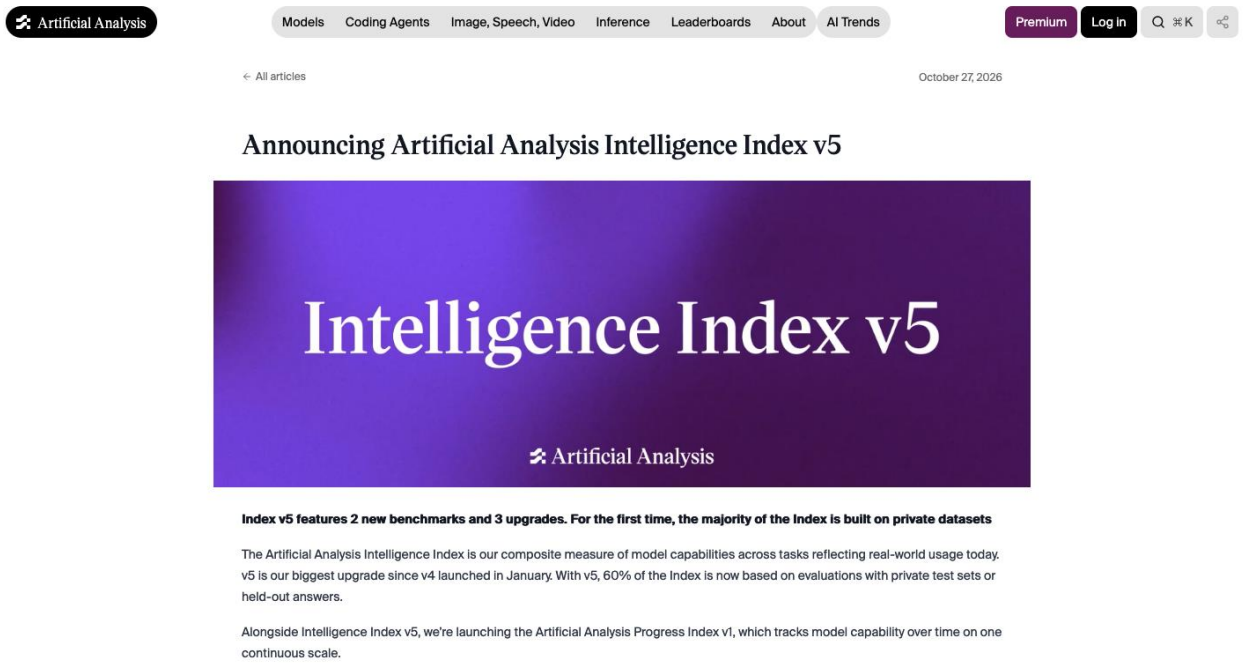

Learning goals

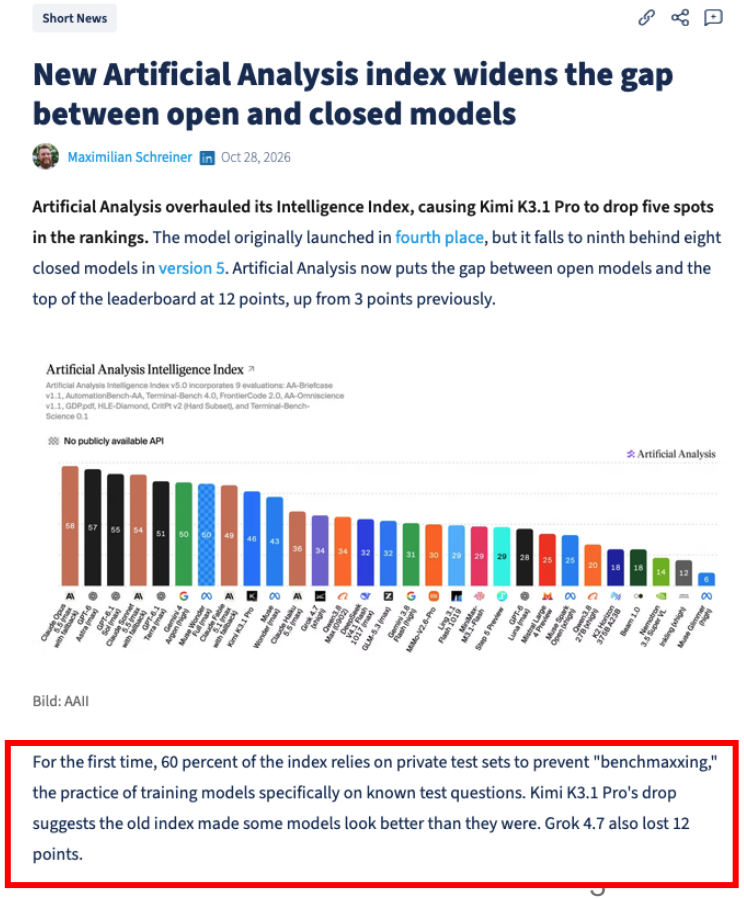

1. Explicating what benchmark are, why they are important but also limited
2. Designing and applying a solid workflow for data analysis with LLMs

1. In the news: benchmarks

1.1 In the news: benchmarks

- Artificial Analysis Intelligence index has become the go-to LLM benchmark
  - Benchmarking is subject to their weighing of e.g. public vs private, and coding vs. knowledge tasks
  - Benchmarks provide a **rough** indication of model quality

2.Tabular data analysis with LLMs (homework task 1)

2.1 Think about the task

- Before we start, let's brainstorm together a bit about our workflow *without* using AI
  - Key steps, success/fail criteria, assumptions on the data, privacy, etc.

2.2 Trying to 'zeroshot' the task

- Let's be lazy and offload the task to a LLM. What is useful and what is missing in this result?
  - I have a dataset for which I need to analyse Lengt | Shared Copilot Chat

2.3 Beware for...

Fancy garbage

2.4 Try to do better!

- Let's try to do better; either you in pairs, or all together with one of you at the wheel

3.Text data analysis with LLMs (homework task 2)

3.1 Think about task 2

- Before we start, let's brainstorm together a bit about our workflow *without* using AI
  - Key steps, success/fail criteria, assumptions on the data, privacy, etc.

3.2 Do the task the lazy way

- Let's be lazy and offload the task to a LLM. What is useful and what is missing in this result?
- I want to do a text classification task where I ge | Shared Copilot Chat

3.3 Try to do better

- Let's try to do better; either you in pairs, or all together with one of you at the wheel

4.If you didn't do so already: join the LLMcom

LLMcom
